DUSTCUBE
Clearing the Air, Protecting Everywhere

DustCube Tornado

Designed and manufactured in the UK, the DustCube Tornado is currently the most powerful machine in its range, playing a vital role in dust management by effectively suppressing and controlling particulates. This not only protects the health and safety of humans and animals but

The DustCube dust suppression equipment efficiently disperses an ultra-fine water mist of 20 microns into targeted areas, maximising water usage while enhancing dust capture. The DustCube Tornado provides a comprehensive, low-pressure, self-contained mobile dust suppression solution for a variety of outdoor applications, including but not limited to demolition, ground remediation, bulk material handling, waste transfer, landfill operations, and crushing, screening , bio-fuel processing, construction, Mining and quarrying, aggregates and manufacturing

With a 1000 or 2000 Lt bowser/Tank , this unit operates autonomously, enabling approximately 30 - 60 minutes of continuous spraying time without relying on a fixed water supply.

Features and Benefits:

- Portable, mobile and fully contained for convenience and ease of operation
- Latest Atomiser technology for ultra fine mist, to maximise particle pull down
- Quality components for sustainability and reliability
- Optimised design and performance for minimum fuel and water
- consumption
- 20 Micron particle size to prevent excess water saturation
- Galvanised components for robustness against extreme conditions
- Variable operating speeds(T-II) adapting to changing situations

Product Dimensions / Weight			
Overall Length:	5.9 Metres	Overall Width:	1.83 Metres
Height to top of Cannon	2.59 Metres	Weight:	1500 KG - Tank Empty 2500-3500 KG - Tank Full
Supplied with Lifting eyes and fork pockets			
Water Tank	On Skid or Bowser	Bowser	Other Features
Capacity:	1000 Ltrs	2000 Ltrs	Manual Drain & Pump protection
Available on Twin axel trailer			
Cannon Performance		Water Consumption:	Maximum 30 LPM
Range	60 Metres	Water Droplet Size:	20 Micron
Other Features	Manually operated cannon rotation angle through 180° and tilting angle settings 45°		
	Compliant Lifting Eyes/Fork Pockets		
Fuel / Power Source (Integral)		Diesel Generator or 400V Electricity
